

Early Learning Goal

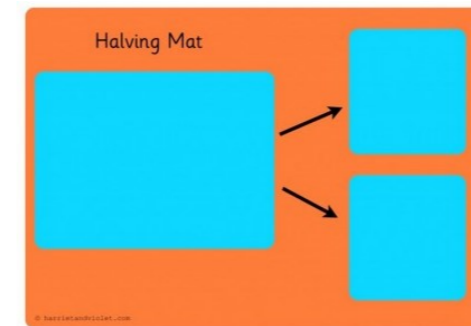

Solve problems involving doubling, halving and sharing

Vocabulary

Double, two lots of, two groups of, pair, twice as many, even, half, halve, share, between two, equal, how many each

Strategies

Role-play and skills based e.g. cooking, counting in pairs e.g. hands and feet, songs, sharing using manipulatives, odds and evens, numicon

Finding doubles

Year 1	Solve one-step problems involving multiplication and division, by calculating the answer using concrete objects, pictorial representations and arrays with the support of the teacher.
Year 2	Recall and use multiplication and division facts for the 2, 5 and 10 multiplication tables, including recognising odd and even numbers Calculate mathematical statements for multiplication and division within the multiplication tables and write them using the multiplication (×), division (÷) and equals (=) signs Show that multiplication of two numbers can be done in any order (commutative) and division of one number by another cannot Solve problems involving multiplication and division, using materials, arrays, repeated addition, mental methods, and multiplication and division facts, including problems in contexts.

Vocabulary

Multiply, times, lots of, groups of, repeated addition
Divide, share equally, group, remainder

Strategies

Multiplication: Counting in steps with bead strings, sets of objects, coins, on a hundred square etc., arrays and number line to show commutative laws, repeated addition on a number line
Division: Sharing using manipulatives and pictorial representations, grouping as repeated subtraction on number line

$4 \times 5p = 20p$

$5p + 5p + 5p + 5p = 20p$

$12 \div 3 = 4$

Three groups of two is equal to six.
Six divided into three equal groups is equal to two.

(a) Divide these 16 oranges equally between 4 families.

Each family gets 4 oranges.

So there are four related facts:

- $3 \times 5 = 15$
- $5 \times 3 = 15$
- $15 \div 3 = 5$
- $15 \div 5 = 3$

$3 \times 2 = 6$

$15 \div 3 = 5$ is the number of times you can subtract 3 from 15 before you get to 0.

$15 - 3 - 3 - 3 - 3 - 3 = 0$
 $15 \div 3 = 5$

$3 \times 6 = 6 \times 3$

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
21	22	23	24	25	26	27	28	29	30
31	32	33	34	35	36	37	38	39	40
41	42	43	44	45	46	47	48	49	50
51	52	53	54	55	56	57	58	59	60
61	62	63	64	65	66	67	68	69	70
71	72	73	74	75	76	77	78	79	80
81	82	83	84	85	86	87	88	89	90
91	92	93	94	95	96	97	98	99	100

Mastery	Mastery with Greater Depth
Sarah is filling party bags with sweets. She has 20 sweets altogether and decides to put 5 in every bag. How many bags can she fill?	How else could 20 sweets be put into bags so that every bag had the same number of sweets? How many bags would be packed each time?

Mastery	Mastery with Greater Depth
Two friends share 12 sweets equally between them. How many do they each get? Write this as a division number sentence. Make up two more sharing stories like this one. Chocolate biscuits come in packs (groups) of 5. Sally wants to buy 20 biscuits in total. How many packs will she need to buy? Write this as a division number sentence. Make up two more grouping stories like this one.	Two friends want to buy some marbles and then share them out equally between them. They could buy a bag of 13 marbles, a bag of 14 marbles or a bag of 19 marbles. What size bag should they buy so that they can share them equally? What other numbers of marbles could be shared equally? Explain your reasoning.

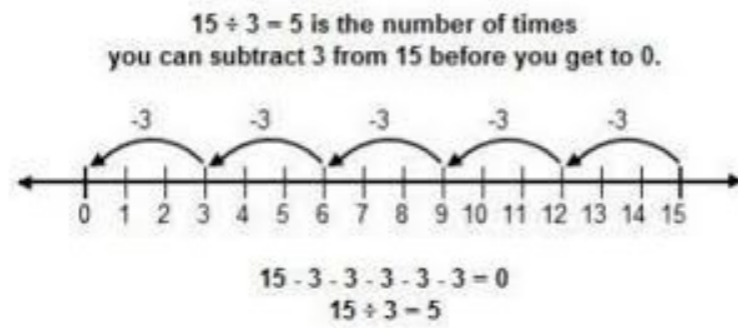

Year 3	Recall and use multiplication and division facts for the 3, 4 and 8 multiplication tables Write and calculate mathematical statements for multiplication and division using the multiplication tables that they know, including for two-digit numbers times one-digit numbers, using mental and progressing to formal written methods Solve problems, including missing number problems, involving multiplication and division, including positive integer scaling problems and correspondence problems in which n objects are connected to m objects.
Year 4	Recall multiplication and division facts for multiplication tables up to 12×12 Use place value, known and derived facts to multiply and divide mentally, including: multiplying by 0 and 1; dividing by 1; multiplying together three numbers Recognise and use factor pairs and commutativity in mental calculations Multiply two-digit and three-digit numbers by a one-digit number using formal written layout Solve problems involving multiplying and adding, including using the distributive law to multiply two digit numbers by one digit, integer scaling problems and harder correspondence problems such as n objects are connected to m objects.

Vocabulary

Multiply, times, lots of, groups of, product, repeated addition
Divide, share equally, group, remainder

Strategies

Multiplication: Arrays, repeated addition on number line, grid method, expanded column method (with place value headings and brackets for support)
Division: Sharing with manipulatives, grouping as repeated subtraction on a number line, chunking

73 ÷ 5

5	73	
-	50	(10 × 5)
	23	
-	20	(4 × 5)
	3	

10 + 4 = 14

How many 5s have been subtracted?
14 sets of 5, with 3 left over.
Answer: 73 ÷ 5 = 14 r3

×	30	5
7	210	35

210 + 35 = 245

123 × 5

×	100	20	3
5	500	100	15
	500	100	15
	+	100	
	+	15	
		615	

Mastery
Complete the following: $3 \times \square = 12$ $4 \times \square = 20$ $\square \times 3 = 15$ $8 \times \square = 24$
Use a column method to calculate the following: 123×3 324×4 234×8

Mastery with Greater Depth			
$\square \square \times \square = ?$ Putting the digits 1, 2 and 3 in the empty boxes, how many different calculations can you make? Which one gives the largest answer? Which one gives the smallest answer?			
Find the missing digits. <table border="0"> <tr> <td>$\begin{array}{r} 2 \square \\ \times 8 \\ \hline 176 \end{array}$</td> <td>$\begin{array}{r} 2 \square \\ \times \square \\ \hline 112 \end{array}$</td> <td>$\begin{array}{r} 1 \square 4 \\ \times \square \\ \hline 736 \end{array}$</td> </tr> </table>	$\begin{array}{r} 2 \square \\ \times 8 \\ \hline 176 \end{array}$	$\begin{array}{r} 2 \square \\ \times \square \\ \hline 112 \end{array}$	$\begin{array}{r} 1 \square 4 \\ \times \square \\ \hline 736 \end{array}$
$\begin{array}{r} 2 \square \\ \times 8 \\ \hline 176 \end{array}$	$\begin{array}{r} 2 \square \\ \times \square \\ \hline 112 \end{array}$	$\begin{array}{r} 1 \square 4 \\ \times \square \\ \hline 736 \end{array}$	

Mastery			
Three children calculated 7×6 in different ways. Identify each strategy and complete the calculations. <table border="0"> <tr> <td>Annie $7 \times 6 = 7 \times 5 + \square$ $= \square$</td> <td>Bertie $7 \times 6 = 7 \times 7 - \square$ $= \square$</td> <td>Cara used the commutative law $7 \times 6 = \square \times \square$ $= \square$</td> </tr> </table>	Annie $7 \times 6 = 7 \times 5 + \square$ $= \square$	Bertie $7 \times 6 = 7 \times 7 - \square$ $= \square$	Cara used the commutative law $7 \times 6 = \square \times \square$ $= \square$
Annie $7 \times 6 = 7 \times 5 + \square$ $= \square$	Bertie $7 \times 6 = 7 \times 7 - \square$ $= \square$	Cara used the commutative law $7 \times 6 = \square \times \square$ $= \square$	
Now find the answer to 6×9 in three different ways.			
Tom ate 9 grapes at the picnic. Sam ate 3 times as many grapes as Tom. How many grapes did they eat altogether?			

Mastery with Greater Depth
Multiply a number by itself and then make one factor one more and the other one less. What happens to the product? E.g. $4 \times 4 = 16$ $6 \times 6 = 36$ $5 \times 3 = 15$ $7 \times 5 = 35$ What do you notice? Will this always happen?
Sally has 9 times as many football cards as Sam. Together they have 150 cards. How many more cards does Sally have than Sam?

Year 5	<p>Identify multiples and factors, including finding all factor pairs of a number, and common factors of two numbers.</p> <p>Know and use the vocabulary of prime numbers, prime factors and composite (non-prime) numbers; Establish whether a number up to 100 is prime and recall prime numbers up to 19</p> <p>Multiply and divide numbers mentally drawing upon known facts; Multiply and divide whole numbers and those involving decimals by 10, 100 and 1000</p> <p>Recognise and use square numbers and cube numbers, and notation for squared and cubed</p> <p>Divide numbers up to 4 digits by a one-digit number using the formal written method of short division and interpret remainders appropriately for the context</p> <p>Multiply numbers up to 4 digits by a one- or two-digit number using a formal written method, including long multiplication for two-digit numbers</p> <p>Solve problems involving multiplication and division including using their knowledge of factors and multiples, squares and cubes; involving addition, subtraction, multiplication and division and a combination of these, including understanding the meaning of the equals sign; involving multiplication and division, including scaling by simple fractions and problems involving simple rates.</p>
Year 6	<p>Multiply multi-digit numbers up to 4 digits by a two-digit whole number using the formal written method of long multiplication</p> <p>Divide numbers up to 4 digits by a two-digit whole number using the formal written method of long division, and interpret remainders as whole number remainders, fractions, or by rounding, as appropriate for the context</p> <p>Divide numbers up to 4 digits by a two-digit number using the formal written method of short division where appropriate, interpreting remainders according to the context</p> <p>Perform mental calculations, including with mixed operations and large numbers; Identify common factors, common multiples and prime numbers</p> <p>Use their knowledge of the order of operations to carry out calculations involving the four operations</p> <p>Solve problems involving addition, subtraction, multiplication and division. Use estimation to check answers to calculations and determine, in the context of the problem, an appropriate degree of accuracy.</p>

Vocabulary

Multiply, times, lots of, groups of, product, repeated addition
 Divide, share equally, group, remainder

Strategies

Multiplication: Expanded column method (with then without brackets and place value headings to support) , Short multiplication (progressing to decimals)
 Division: Chunking (for long division) and short division

23 r 4

$$\begin{array}{r} 24 \overline{) 556} \\ \underline{-480} \\ 76 \\ \underline{-72} \\ 4 \end{array}$$

24 x 20 = 480
 24 x 3 = 72

Mastery	Mastery with Greater Depth	Mastery	Mastery with Greater Depth
<p>It is correct that $273 \times 32 = 8736$. Use this fact to work out:</p> <ul style="list-style-type: none"> 27.3 x 3.2 2.73 x 32.000 873.6 ÷ 0.32 87.36 ÷ 27.3 8736 ÷ 16 4368 ÷ 1.6 	<p>Which calculation is the odd one out?</p> <ul style="list-style-type: none"> 753 x 1.8 (75.3 x 3) x 6 753 + 753 ÷ 5 x 4 7.53 x 1800 753 x 2 - 753 x 0.2 750 x 1.8 + 3 x 1.8 <p>Explain your reasoning.</p>	<p>Miriam and Alan each buy 12 tins of tomatoes.</p> <p>Miriam buys 3 packs each containing 4 tins. A pack of 4 costs £1.40.</p> <p>Alan buys 2 packs each containing 6 cans. A pack of 6 costs £1.90.</p> <p>Who gets the most change from a £5 note?</p>	<p>Miriam buys 19 tins of soup. All the tins cost the same price.</p> <p>She goes to the shop with just one note, and comes home with the tins and the change in coins. On the way home she drops the change. She looks carefully and she thinks she picks it all up. When she gets home she gives £2.23 change to her mother.</p> <p>Do you think that Miriam picked up all the change that she dropped?</p> <p>Explain your reasoning.</p>
